

Paradigm Trust Pedagogy Newsletter #17

25th January 2019

Dear colleagues,

This week I've been reading about long term memory and the place of schemas. It can be very difficult to retrieve isolated pieces of knowledge from our long term memories. The retrieval process becomes easier once information is linked to other pieces of information. The information is linked together to form schemas which David Didau explains as 'interconnected web of items of knowledge'.

Didau elaborates on schemes and their relevance to education in this [blog](#).

Many thanks

Kavitha Nicholas-Raymond
