

## Pedagogy Newsletter #39

Friday 18th October 2019

Dear colleagues,

I wanted to bring your attention to the 'maths no problem' blog which publishes some interesting posts on mathematics and teaching for mastery.

The articles are relevant to all teachers who teach maths, not only those following a particular scheme. This week's blog post is about using a mastery approach in Year 6 and how this supports their transition into Year 7.

I know some of you may not be using a maths mastery scheme of work in year 6, but I would encourage you to be familiar with the mastery approach, and use it in your practice anyway.

*"Year 6 is an important one. It's your opportunity to help your mathematicians foster a growth mindset, an understanding of the different areas of study, and a sense of confidence. They should be fluent in a variety of procedures and have a solid foundation for solving multi-step problems- Important skills found in a mastery approach."*

Have a great read,

Kind regards
